

# If you are a Ham Radio Operator and work for Boeing BACS Wants You!

The **Boeing Auxiliary Communications Service (BACS)** is a team of employees and contractors who are FCC-licensed amateur radio ("ham") operators, who provide backup communications when normal channels become damaged or overloaded due to natural or man-made disasters.

**BACS** is a **Boeing Enterprise S&FP Disaster Preparedness Org.** and is the **only official** ham radio organization that **supports Boeing S&FP DP.**

**BACS** primary task is to provide Emergency Communications, using Amateur Radio Frequencies to communicate from Boeing site EOC's to Boeing site EOC's during a disaster.

**Secondarily**, provide emergency communications between local government authorities and local Boeing site EOC's.

Other duties may include but are not limited to (depending on your sites needs):

- Supporting Volunteer Disaster Responders (VDRs), facilities personnel, and anyone else responsible for protecting lives and property at Boeing.
- "Shadowing" fire and security personnel.
- If needed, field communications.
- Operate company radios during all three phases of a disaster.

**BACS** teams are all ready operating at Boeing sites around the country. Including; Enterprise ECMC and 14 other sites in Washington/Oregon, California, Texas, Utah, Alabama. More are coming on line as they learn about us.

This is your opportunity to use your amateur radio skills to protect yourself and your coworkers in an emergency. All you need are your ham license (technician or higher) handheld radio, and a desire to help.

**Don't have a team at your site?? We can help with that too.**
